## **Prerequisites:**

The configuration depends on number of devices that will operate at the same time. It depends on RAM heavily, especially for the buffers of played files. Each file is fully read into RAM before play.

This the most important request from the program.

The cards must be configured to have one "Voice Pack" available for each phone and line on the cards, in case you use built in macros.

## **Minimum hardware requirements:**

CPU Pentium 500mhz class processor

RAM 256Mb

MonteCarlo 2.7(and one or more 2.7 supported PIKA cards)

Hard Disk: 1 MB + space for application.

One additional MB or RAM for each simultaneous playing/recording channel.

## **Optimum hardware requirements:**

CPU Pentium 1000mhz class processor

RAM 512Mb

MonteCarlo 2.7(and one or more 2.7 supported PIKA cards)

Hard Disk: 1 MB + space for application.

One additional MB or RAM for each simultaneous playing/recording channel.

**Methods:**

The methods will return a value when there is a result. The call was success if the returned value is 0 otherwise the method returns an error.

Note : If the method returns a negative value then it is related to PIKA<sup>®</sup> API reference  
If the method returns a positive value other than 0 it is a procedural error in  
ActiveX.

Both these error references can be found in reference material.

Call names starting with Phone are related to Phones(POTS or agents analog terminals).  
Call names starting with Trunk are related to Trunks, both digital and analog.

## ***EnableDevice***

### **Syntax:**

**long EnableDevice(CardN, TrunkN, LineN, DeviceType, PhoneNumber as string)**

### **Description:**

The call is used **BEFORE** calling Initialise to select the devices that will be activated in the next call to Initialise. It must (when needed) be called for each device (Trunk or Phone) you need to use. The enumeration of Trunks/Phones will be altered by this call, unused lines/channels will not counted.

After the call to Initialise another call to EnableDevice has no effect. If case this method is not called, Initialise function will enable all devices present (and defined in MCSetup) at their full capabilities.

The first card is referred to as card 0 (see MCSetup)

Trunks entry on each Card and Lines start with 0.

Analog Cards have Trunk 0 entry and lines ranging from 0 to MaxLines-1.

If Device Type is 0 then it is called Line Entry.

If Device Type > 0 then it is called Phone Entry.

Combined devices (Lines/Phones) have separate enumeration, each having its own group.

Any Kind of card mixture is supported.

Phone Number entry is to relate an analog line to a particular number. So in case of incoming call the event will report this number as the called line number.

### **Terminating events:**

**NONE**

## **Initialise**

### **Syntax:**

**long Initialise(SetDspResources as integer)**

### **Description:**

This method allows initialisation of system resources(Trunks, Phones, DSP, MVIP, etc). The resources(like Phones, Trunks including digital ports) will be numbered starting from 1 when the initialisation method finds first card on the system.

The enumeration is separate for phones and trunks (For eg. Phone #1 and Trunk #1) Every method or event except for DSP resources is referred to such an enumeration.

DSP resources cannot exist free from phones or trunks. If they are created they are “associated” to a trunk or phone then further references to them is done by their “associated” device (Phone or Trunk).

The parameter “SetDSPResources” will have a set. If set > 0 then the initialisation process will create the default DSP resource and associate them to every phone and trunk.

In the beta version, if the chosen protocol for a digital trunk needs robbed bit signaling, the DSP port associated to the trunk is dedicated for this purpose till it is freed from this function with proper method. The trunks are then enabled for incoming call signaling.

### **Terminating events:**

**NONE**

## **PhoneConnect**

### **Syntax:**

[long PhoneConnect\(Resource1, Resource2, Type \)](#)

### **Description:**

This method allows to connect resources via CTBus. The argument value type defines the connection to do on the bus.

These are Full Duplex Connections, if a connection is active then the phone for this connection will be disconnected.

Type entry	Resource 1	Resource 2
1	Phone Resource #	Associated DPS resource
2	Phone Resource #	Phone Resource #
3	Phone Resource #	Trunk Resource #
0	No connection	

### **Terminating events:**

**NONE**

## **TrunkConnect**

### **Syntax:**

[long TrunkConnect\(Resource1, Resource2, Type \)](#)

### **Description:**

This method allows to connect resources via CTBus. The argument value type defines the connection to do on the bus.

These are Full Duplex Connections, if a connection is active then the Trunk for this connection will be disconnected.

Type entry	Resource 1	Resource 2
1	Trunk Resource #	Associated DPS resource
2	Trunk Resource #	Trunk Resource #
3	Trunk Resource #	Phone Resource #
0	No connection	

Note : In one case the connection method returns the same result.

For eg. PhoneConnect(7,4,3) gets the same result as TrunkConnect(4,7,3)

It connects to Phone#7 with Trunk#3.

### **Terminating events:**

**NONE**

## ***PhoneDisconnect***

### **Syntax:**

[long PhoneDisconnect\(Phone resource# \)](#)

### **Description:**

Disconnects the resource from the bus and the resource previously connected. No action if not connected.

This function closes the devices opened previously by using Connect().

### **Terminating events:**

**NONE**

## ***TrunkDisconnect***

### **Syntax:**

[long TrunkDisconnect\(Trunk resource# \)](#)

### **Description:**

Disconnects the resource from the bus and the resource previously connected. No action if not connected.

This function closes the devices opened previously by using Connect().

### **Terminating events:**

NONE

## ***PhoneGetHandle***

### **Syntax:**

[long PhoneGetHandle \(Phone resource# \)](#)

### **Description:**

Gets the port handle of Phone resource as return value. This handle is used for reference purpose

### **Terminating events:**

**NONE**

## ***TrunkGetHandle***

### **Syntax:**

[long TrunkGetHandle \(Trunk resource# \)](#)

### **Description:**

Gets the port handle of Trunk resource as return value. This handle is used for reference purpose

### **Terminating events:**

**NONE**

## ***PhoneGetDspHandle***

### **Syntax:**

[long PhoneGetDspHandle \(Phone resource# \)](#)

### **Description:**

Gets the port handle of DSP Associated to phone resource as return value. This handle is used for reference purpose

### **Terminating events:**

**NONE**

## ***TrunkGetDspHandle***

### **Syntax:**

[long TrunkGetDspHandle \(Trunk resource# \)](#)

### **Description:**

Gets the port handle of DSP Associated to Trunk resource as return value. This handle is used for reference purpose

### **Terminating events:**

**NONE**

## ***PhonePlay***

### **Syntax:**

**long PhonePlay(VoiceFileName as string, Phone resource#, format as integer)**

### **Description:**

This function plays recorded voice data to the phone using the associated DSP vocal resource. If the resource is not connected it's connected automatically and eventually connected resource is disconnected. A buffer equals to the size of the file is created in memory and maintained automatically.

The audio file format is defined by the format greater than 0. By default format is equal to 0 and it is 8 Bit PCM encoding format with a sampling rate of 6KHz.

### **Terminating events:**

***PhoneEndPlay***

## ***TrunkPlay***

### **Syntax:**

**long TrunkPlay(VoiceFileName as string, Trunk resource#, format as integer)**

### **Description:**

This function plays recorded voice data to the Trunk using the associated DSP vocal resource. If the resource is not connected it's connected automatically and eventually connected resource is disconnected. A buffer equals to the size of the file is created in memory and maintained automatically.

The audio file format is defined by the format greater than 0. By default format is equal to 0 and it is 8 Bit PCM encoding format with a sampling rate of 6KHz.

### **Terminating events:**

**TrunEndPlay**

## ***PhoneRecord***

### **Syntax:**

**long PhoneRecord(VoiceFileName as string, maxbytes as integer, Phone resource#, format as integer)**

### **Description:**

This function records voice data from a phone # using the associated DSP vocal resource. If the resource is not connected it's connected automatically eventually connected resource is disconnected.

A buffer of proper size is created in the memory of the system and maintained automatically. If the buffer is full then recording automatically stopped and the file is closed.

The audio file format is defined by the format greater than 0. BY default format is equal to 0 and it is 8 Bit PCM encoding format with a sampling rate of 6KHz.

### **Terminating events:**

**PhoneEndRecord**

## **TrunkRecord**

### **Syntax:**

**long TrunkRecord(VoiceFileName as string, maxbytes as integer, Trunk resource#, format as integer)**

### **Description:**

This function records voice data from a Trunk # using the associated DSP vocal resource. If the resource is not connected it's connected automatically eventually connected resource is disconnected.

A buffer of proper size is created in the memory of the system and maintained automatically. If the buffer is full then recording automatically stopped and the file is closed.

The audio file format is defined by the format greater than 0. BY default format is equal to 0 and it is 8 Bit PCM encoding format with a sampling rate of 6KHz.

### **Terminating events:**

**TrunkEndRecord**

## ***PhoneRing***

### **Syntax:**

**long PhoneRing(Phone resource#, ringtype, duration)**

### **Description:**

This function generates a ring on phone #. Ring type ranges from 0 to 15. The duration of the ring will be in milliseconds. If the duration is 0 then the function generates endless rings.

### **Terminating events:**

**PhoneNoAnswer**

## ***TrunkMakeCall***

### **Syntax:**

**long TrunkMakeCall(Number as string, Trunk resource#)**

### **Description:**

This function allows to make a call on Trunk. If the trunk is analog then first it takes OffHook and makes a call. Once the call is terminated it will be set back to OnHook.

### **Terminating events:**

**TrunkCallConnected**

**(Positive connection)**

**TrunkCallFailed**

**(Negative connection)**

## ***TrunkTerminateCall***

### **Syntax:**

[long TrunkTerminateCall\( Trunk resource#\)](#)

### **Description:**

This function allows to terminate a call on Trunk. If the trunk is analog then first it takes OnHook and terminates a call.

### **Terminating events:**

**[TrunkCallTerminated](#)**

## ***TrunkAcceptCall***

### **Syntax:**

[long TrunkAcceptCall\( Trunk resource#\)](#)

### **Description:**

This function accepts an incoming call on Trunk( both digital and analog).

### **Terminating events:**

[TrunkAnswered](#)

[TrunkCallTerminated](#)

## ***TrunkAssociateDsp (Function not implemented)***

### **Syntax:**

[long TrunkAssociateDsp\( Trunk resource#\)](#)

### **Description:**

This method enable a Trunk Associated DSP port to handle protocols requiring in band signalling.

### **Terminating events:**

**NONE**

## **TrunkSetOnHook**

### **Syntax:**

[long TrunkSetOnHook\( Trunk resource#\)](#)

### **Description:**

This method sets the Trunk status to OnHook if the device is analog. If digital it does nothing.

Normally this task is handled by the other MACROs, so it's not required in normal operation.

### **Terminating events:**

**TrunkOnHook**

## **TrunkSetOffHook**

### **Syntax:**

[long TrunkSetOffHook\( Trunk resource#\)](#)

### **Description:**

This method sets the Trunk status to OffHook if the device is analog. If digital it does nothing.

Normally this task is handled by the other MACROs, so it's not required in normal operation.

### **Terminating events:**

TrunkOffHook

## ***PhoneGenerateSound***

### **Syntax:**

**long PhoneGenerateSound(sound #, Phone resource#)**

### **Description:**

This method generates a sound(sound #) on the phone#

### **Terminating events:**

**PhoneEndSound**

## **TrunkGenerateSound**

### **Syntax:**

[long TrunkGenerateSound\(sound #,Trunk resource#\)](#)

### **Description:**

This method generates a sound(sound #) on the Trunk#

### **Terminating events:**

**PhoneEndSound**

## ***PhoneStopVoice***

### **Syntax:**

[long PhoneStopVoice\(Phone resource#\)](#)

### **Description:**

This method terminates playing the voice file on Phone#.

### **Terminating events:**

**PhoneEndVoice**

## ***TrunkStopVoice***

### **Syntax:**

[long TrunkStopVoice\(Phone resource#\)](#)

### **Description:**

This method terminates playing the voice file on Trunk#.

### **Terminating events:**

[TrunkEndVoice](#)

## ***PhoneStopSound***

### **Syntax:**

[long PhoneStopSound\(Phone resource#\)](#)

### **Description:**

This method terminates playing a sound on Phone#.

### **Terminating events:**

**[TrunkEndSound](#)**

## ***TrunkStopSound***

### **Syntax:**

[long TrunkStopSound\(Trunk resource#\)](#)

### **Description:**

This method stops playing the sound on Trunk#.

### **Terminating events:**

[TrunkEndSound](#)

## ***PhoneDeleteDspPort***

### **Syntax:**

**long PhoneDeleteDspPort(Phone resource#)**

### **Description:**

This method deletes DSP resources associated to phone# and disconnects from the bus. To use this method the resource must be idle.

### **Terminating events:**

**NONE**

## ***TrunkDeleteDspPort***

### **Syntax:**

[long TrunkDeleteDspPort\(Phone resource#\)](#)

### **Description:**

This method deletes DSP resources associated to Trunk # and disconnects from the bus. To use this method the resource must be idle.

### **Terminating events:**

**NONE**

## ***PhoneEnableDtmfDetection***

### **Syntax:**

[long PhoneEnableDtmfDetection\(Phone resource#\)](#)

### **Description:**

This method enables detection of DTMF digits on the associated DSP resource.

### **Terminating events:**

**NONE**

## ***TrunkEnableDtmfDetection***

### **Syntax:**

[long TrunkEnableDtmfDetection \(Trunk resource#\)](#)

### **Description:**

This method enables detection of DTMF digits on the associated DSP resource.

### **Terminating events:**

**NONE**

## ***PhoneDisableDtmfDetection***

### **Syntax:**

**[long PhoneDisableDtmfDetection\(Phone resource#\)](#)**

### **Description:**

This method enables detection of DTMF digits on the associated DSP resource.

### **Terminating events:**

**NONE**

## ***TrunkDisableDtmfDetection***

### **Syntax:**

[long TrunkDisableDtmfDetection\(Phone resource#\)](#)

### **Description:**

This method enables detection of DTMF digits on the associated DSP resource.

### **Terminating events:**

**NONE**

## Events for Phone and associated DSP ports:

### ***PhoneOnHook (Phone resource#)***

This event informs Phone # went OnHook.

### ***PhoneOffHook (Phone resource#)***

This event informs Phone # went OffHook.

### ***PhoneHookFlash (Phone resource#)***

This event informs Phone # send HookFlash.

### ***PhoneEndPlay (Phone resource#)***

This event informs Phone # ended playing a voice file (or voice file play is cancelled)

### ***PhoneEndSound (Phone resource#)***

This event informs Phone # ended playing a sound (or sound is cancelled)

### ***PhoneEndRecord (Phone resource#)***

This event informs Phone # ended recording a voice file (or voice file recording is cancelled)

### ***PhoneNoAnswer (Phone resource#)***

This event informs Phone # timed out while ringing with no answer.

### ***PhoneBusy (Phone resource#)***

This event returns if phone # is busy.

### ***PhoneDtmfDetected (Phone resource#, digit)***

This event is generated when a DTMF Digit is detected. The “digit” is the character digit.

## Events for Trunk and associated DSP ports:

### ***TrunkInCall (Trunk resource#, CallingNo as String, CalledNo as String)***

This method informs Trunk # has an incoming call. The calling number and called number are reported if available, otherwise returned blank.

### ***TrunkAnswered (Trunk resource#)***

This method informs the Trunk # answered an incoming call.

### ***TrunkCallTerminated (Trunk resource#)***

This method informs Trunk # has terminated a call.

### ***TrunkSyncOff (Trunk resource#)***

This method informs Trunk # loose its sync with CO.

### ***TrunkSyncOn (Trunk resource#)***

This method informs Trunk # is sync with CO.

### ***TrunkOffHook (Trunk resource#)***

This method informs Trunk # gone OffHook.

### ***TrunkOnHook (Trunk resource#)***

This method informs Trunk # gone OnHook.

### ***TrunkEndPlay (Trunk resource#)***

This method informs Trunk # ended playing a voice file( or voice file play cancelled)

### ***TrunkEndSound (Trunk resource#)***

This method informs Trunk # ended playing a sound ( or sound is cancelled)

### ***TrunkEndRecord (Trunk resource#)***

This method informs Trunk # ended Recording a voice file( or voice file recording cancelled)

### ***TrunkDtmfDetected (Trunk resource#, digit)***

This method generates a DTMF Digit.

### ***TrunkCallFailed(Trunk Resource#, Reason as integer)***

This method informs the Trunk # didn't complete the call dialing.

### ***TrunkCallConnected(Trunk Resource#)***

This method informs the Trunk # completed the call dialing successfully.

## **Return codes from methods' calls:**

### ***PARAM1\_NOT\_OK ( 2)***

Parameter 1 in call non correct or out of bound

### ***NO\_RESOURCE\_ASSOCIATED ( 3)***

The action requested needs an associated resource but this is absent

### ***PARAM2\_NOT\_OK ( 4 )***

Parameter 2 in call non correct or out of bound.

### ***INVALID\_CONNECTION\_PARAMETER ( 5)***

Parameter for connection type is wrong or resource is non correctly routed.

### ***RESOURCE\_IS\_NOT\_ROUTED ( 6)***

Attempt to disconnect an unrouted resource.

### ***VOCAL\_FILE\_NOT\_FOUND (10)***

The requested vocal file cannot be found

### ***VOCAL\_RESOURCE\_BUSY (11)***

The vocal resource is busy.

### ***UNABLE\_TO\_ADD\_BUFFER (12)***

The record/play buffer cannot be added to the pool(should never happen)

### ***UNABLE\_TO\_START\_VOICE (13)***

Not able to start a play/record.

### ***PLAY\_RECORD\_FORMAT\_NOT\_VALID (15)***

Format for play and record

**FATAL\_GENERAL\_ERROR ( 99)**

Unrecoverable error
